Investigators interested in using this rating scale should contact Lawrence Scahill, M.S.N., Ph.D., at the Yale Child Study Center, P.O. Box 207900, New Haven, CT 06520 or Wayne Goodman, M.D., at the National Institute of Mental Health, Bethesda, MD.

Scahill, L., Riddle, M.A., McSwiggin-Hardin, M., Ort, S.I., King, R.A., Goodman, W.K., Cicchetti, D. & Leckman, J.F. (1997). Children's Yale-Brown Obsessive Compulsive Scale: reliability and validity. *J Am Acad Child Adolesc Psychiatry*, 36(6):844-852.

GENERAL INSTRUCTIONS

Overview:

This scale is designed to rate the severity of obsessive and compulsive symptoms in children and adolescents, ages 6 to 17 years. It can be administered by a clinican or trained interviewer in a <u>semi-structured fashion</u>. In general, the ratings depend on the child's and parent's report; however, the final rating is based on the clinical judgement of the interviewer. Rate the characteristics of each item over the <u>prior week</u> up until, and including, the time of the interview. Scores should reflect the average of each item for the entire week, unless otherwise specified.

Informants:

Information should be obtained by interviewing the parent(s) (or guardian) and the child together. Sometimes, however, it may also be useful to interview the child or parent alone. Interviewing strategy may vary depending on the age and developmental level of the child or adolescent. All information should be combined to estimate the score for each item. Whenever the CY-BOCS is administered more than once to the same child, as in a medication trial, consistent reporting can be ensured by having the <u>same informant(s) present at each rating session</u>.

Definitions:

Before proceeding with the questions, define "obsessions" and "compulsions" for the child and primary caretaker as follows (sometimes, particularly with younger children, the interviewer may prefer using the terms "worries" and "habits"):

"OBSESSIONS: are thoughts, ideas, or pictures that keep coming into your mind even though you do not want them to. They may be unpleasant, silly or embarrassing."

"AN EXAMPLE OF AN OBSESSION IS: the repeated thought that germs or dirt are harming you or other people, or that something unpleasant might happen to you or someone in your family or someone special to you. These are thoughts that keep coming back, over and over again."

"COMPULSIONS: are things that you feel you have to do although you may know that they do not make sense. Sometimes you may try to stop from doing them but this might not be possible. You might feel worried or angry or frustrated until you have finished what you have to do."

"AN EXAMPLE OF A COMPULSION IS: the need to wash your hands over and over again even though they are not really dirty, or the need to count up to a certain number while you do certain things."

"Do you have any questions about what these words called obsessions and compulsions mean?"

Symptom Specificity and Continuity:

In some cases, it may be difficult to delineate obsessions and compulsions from other closely related symptoms such as phobias, anxious worries, depressive ruminations or complex tics. Separate assessment of these symptoms may be necessary. Although potentially difficult, the delineation of obsessions and compulsions from these closely related symptoms is an essential task of the interviewer. (A full discussion of how to make this determination is beyond the scope and purpose of this introduction.) Items marked with an asterix are items where this delineation may be especially troublesome.

Once the interviewer has decided whether or not a particular symptom will be included as an obsession or compulsion on the checklist, every effort should be made to maintain consistency in subsequent rating(s). In a treatment study with multiple ratings over time, it may be useful to review the initial Target Symptom Checklist (see below) at the beginning of subsequent ratings (prior severity scores should not be reviewed).

Procedure:

Symptom Checklist: After reviewing with the child and parent(s) the definitions of obsessions and compulsions, the interview should proceed with a detailed inquiry about the child's symptoms using the Compulsions Checklist and Obsessions Checklist as guides. It may not be necessary to ask about each and every item on the checklist, but each symptom area should be covered to ensure that symptoms are not missed. For most children and adolescents, it is usually easier to begin with compulsions (pages 9 and 10).

<u>Target Symptom List</u>: After the Compulsions Checklist is complete, list the four most severe compulsions on the Target Symptom List on page 10. Repeat this process, listing the most severe obsessions, on the Target Symptom List on page 5.

Severity Rating: After completing the Checklist and Target Symptom List for compulsions, inquire about the severity items: Time Spent, Distress, Resistance, Interference, and Degree of Control (questions 6 through 10 on pages 11 through 13). There are examples of probe questions for each item. Ratings for these items should reflect interviewer's best estimate from all available information from the past week, with special emphasis on the Target Symptoms. Repeat the above procedure for obsessions (Pages 4 through 8). Finally, inquire about and rate questions 11 through 19 on pages 14 and 18. Scores can be recorded on the scoring sheet on page 19. All ratings should be in whole integers.

Scoring:

All 19 items are rated, but only items 1-10 are used to determine the total score. The **total CY-BOCS score** is the sum of items 1-10; the **obsession and compulsion subtotals** are the sums of items 1-5 and 6-10, respectively. At this time, items 1A and 6A are not being used in the scoring.

Items 17 (global severity) and 18 (global improvement) are adapted from the Clinical Global Impression Scale (Guy, W., 1976) to provide measures of overall functional impairment associated with the presence of obsessive-compulsive symptoms.

Name _	Date
	CY-BOCS OBSESSIONS CHECKLIST
Check al	l items that apply (Item marked "*" may or not be OCD phenomena.)
Current	Past Contamination Obsessions
Current	Concern with dirt, germs, certain illnesses (e.g., AIDS)
<u></u>	Concerns or disgust with bodily waste or secretions (e.g., urine, feces, saliva)
	Excessive concern with environmental contaminants (e.g., asbestos, radiation, toxic waste)
	Excessive concern with household items (e.g., cleaners, solvents)
	Excessive concern about animals/insects
	Excessively bothered by sticky substances or residues
	Concerned will get others ill by spreading contaminant (aggressive)
	No concern with consequences of contamination other than how it might feel *
	Other (Describe)
	Aggressive Obsessions
	Fear might harm self
	Fear might harm others
	Fear harm will come to self
	Fear harm will come to others (may be because something child did or did not do)
	Violent or horrific images
	Fear of blurting out obscenities or insults
	Fear will act on unwanted impulses (e.g. to stab a family member)
	Fear will be responsible for something else terrible happening (e.g. fire, burglary,
	flood)
	Other (Describe)
	Sexual Obsessions
	[Are you having any sexual thoughts? If yes, are they routine or are they repetitive
	thoughts that you would rather not have or find disturbing? If yes, are they:]
	Forbidden or perverse sexual thoughts, images, impulses
	Content involves homosexuality *
	Sexual behavior towards others (Aggressive)
	Other (Describe)
	Hoarding/Saving Obsessions
	Fear of losing things
	Other (Describe)
	Magical Thoughts/Superstitous Obsessions
	Lucky/unlucky numbers, colors, words
	Other (Describe)

Current	Past Somatic Obsessions
<u> </u>	Excessive concern with illness or disease *
<u></u>	Excessive concern with body part or aspect of appearance (e.g., dysmorphophobia) *
	Other (Describe)
	Religious Obsessions (Scrupulosity)
	Excessive concern or fear of offending religious objects (God)
	Excessive concern with right/wrong, morality
	Other (Describe)
	Miscellaneous Obsessions
	The need to know or remember
	Fear of saying certin things
	Fear of not saying just the right thing
	Intrusive (non-violent) images
	Other (Describe)
	TARGET SYMPTOM LIST FOR OBSESSIONS
Obsessio severe, et	$\underline{\text{ns}}$ (Describe, listing by order of severity, with #1 being the most severe, #2 the second most $\underline{\text{tc.}}$):

QUESTIONS ON OBSESSIONS (ITEMS 1-5) "I AM NOW GOING TO ASK YOU QUESTIONS ABOUT THE THOUGHTS YOU CANNOT STOP THINKING ABOUT." (Review for the informant(s) the Target Symptoms and refer to them while asking questions 1-5).

1. <u>Time Occupied by Obsessive Thoughts</u>

• How much time do you spend thinking about these things?

(When obsessions occur as brief, intermittent intrusions, it may be impossible to assess time occupied by them in terms of total hours. In such cases, estimate time by determining how frequently they occur. Consider both the number of times the intrusions occur and how many hours of the day are affected).

• How frequently do these thoughts occur?

[Exclude ruminations and preoccupations which, unlike obsessions, are ego-syntonic and rational (but exaggerated).]

0 - NONE

1 - MILD less than 1 hr/day or occasional intrusion

2 - MODERATE 1 to 3 hrs/day or frequent intrusion

3 - SEVERE greater than 3 and up to 8 hrs/day or very frequent intrusion

4 - EXTREME greater than 8 hrs/day or near constant intrusion

1B. Obsession-free Interval (not included in total score)

• On average, what is the longest amount of time per day that you are not bothered by obsessivethoughts?

0 - NONE

1 - MILD long symptom free intervals, more than 8 consecutive hrs/day symptom-free

2 - MODERATE moderately long symptom-free intervals, more than 3 and up to 8 hrs/day

3 - SEVERE brief symptom-free intervals, from 1 to 3 consecutive hrs/day symptom-free

4 - EXTREME less than 1 consecutive hr/day symptom free

2. Interference due to Obsessive Thoughts

• How much do these thoughts get in the way of school or doing things with friends?

• Is there anything that you don't do because of them?

(If currently not in school determine how much performance would be affected if patient were in school.)

0 - NONE

1 - MILD slight interference with social or school activities, overall performance not impaired

2 - MODERATE definite interference with social or school performance, but still manageable

3 - SEVERE causes substantial impairment in social or school performance

4 - EXTREME incapacitating

3. <u>Distress Associated with Obsesssive Thoughts</u>

• How much do these thoughts bother or upset you?

(Only rate anxiety/frustration that seems triggered by obsessions, not generalized anxiety or anxiety associated with other symptoms.)

0 - NONE

1 - MILD infrequent, and not too disturbing

2 - MODERATE frequent, and disturbing, but still manageable

3 - SEVERE very frequent, and very disturbing

4 - EXTREME near constant, and disabling distress/frustration

4. Resistance Against Obsessions

• How hard do you try to stop the thoughts or ignore them?

(Only rate effort made to resist, not success or failure in actually controlling the obsessions. How much patient resists the obsessions may or may not correlate with their ability to control them. Note that this item does not directly measure the severity of the intrusive thoughts; rather it rates a manifestation of health, i.e., the effort the patient makes to counteract the obsessions. Thus, the more the patient tries to resist, the less impaired is this aspect of his functioning. If the obsessions are minimal, the patient may not feel the need to resist them. In such cases, a rating of "0" should be given.)

0 – NONE makes an effort to always resist, or symptoms so minimal doesn't need to actively resist.

1 - MILD tries to resist most of the time

2 - MODERATE makes some effort to resist

3 - SEVERE yields to all obsessions without attempting to control them, but does so with some

reluctance

4 – EXTREME completely and willingly yields to all obsessions

5. Degree of Control Over Obsessive Thoughts

- When you try to fight the thoughts, can you beat them?
- How much control do you have over the thoughts?

(In contrast to the preceding item on resistance, the ability of the patient to control his obsessions is more closely related to the severity of the intrusive thoughts.

0 - COMPLETE CONTROL

1 - MUCH CONTROL usually able to stop or divert obsessions with some effort and concentration.

2 - MODERATE CONTROL sometimes able to stop or divert obsessions

3 - LITTLE CONTROL rarely successful in stopping obsessions, can only divert attention with difficulty

4 - NO CONTROL experienced as completely involuntary, rarely able to even momentarily divert

thinking

Name	Date
	CY-BOCS COMPULSIONS CHECKLIST
Check all	items that apply (Item marked "*" may or not be OCD phenomena.)
Current	Past Washing/Cleaning Compulsions
Current	Excessive or ritualized handwashing
	Excessive or ritualized showering, bathing, toothbrushing, grooming, or toilet routine
	Excessive cleaning of items; such as personal clothes or important objects
	Other measures to prevent or remove contact with contaminants
	Other (Describe)
	Checking Compulsions
	Checking locks, toys, school books/items, etc.
	Checking associated with getting washed, dressed, or undressed.
	Checking that did not/will not harm others
	Checking that nothing terrible did/will happen
	Checking that did not make mistake
	Checking tied to somatic obsessions
	Other (Describe)
	Repeating Rituals
	Rereading, erasing, or rewriting
	Need to repeat routine activities (e.g. in/out doors, up/down from chair)
	Other (Describe)
	Counting Compulsions
	Objects, certain numbers, words, etc.
	Describe:
	Ordering/Arranging
·	Need for symmetry/evening up (e.g., lining items up a certain way or arranging personal items in
	specific patterns)
	Other (Describe)
	Hoarding/Saving Compulsion
	[distinguish from hobbies and concern with objects of monetary or sentimental value]
	Difficulty throwing things away, saving bits of paper, string, etc.
	Other (Describe)
	Excessive Games/Superstitious Behaviors
	[distinguish from age appropriate magical games]
	(e.g., array of behavior, such as stepping over certain spots on a floor, touching an object/self
	certain number of times as a routine game to avoid something bad from happening.)
	Other (Describe)

Current	Past Rituals Involving Other Persons
	The need to involve another person (usually a parent) in ritual (e.g., asking a parent to repeatedly
	answer the same question, making mother perform certain meal time-rituals involving specific
	utensils).*
	Other (Describe)
	Miscellaneous Compulsions
	Mental rituals (other than checking/counting)
	Need to tell, ask, or confess
	Measures (not checking) to prevent harm to self; harm to others; terrible consequences Ritualized eating behaviors *
	Excessive list making *
	Need to do things (e.g., touch or arrange) until it <u>feels</u> just right) *
	Other self-damaging or self-mutilating behaviors *
	Other (Describe)
	TARGET SYMPTOM LIST FOR COMPULSIONS

QUESTIONS ON COMPULSIONS (ITEMS 6-10) "I AM NOW GOING TO ASK YOU QUESTIONS APOLIT THE HARITS YOU CAN'T STOP!" (Pavious for the informant(s) the Target Symptoms and refer to

ABOUT THE HABITS YOU CAN'T STOP." (Review for the informant(s) the Target Symptoms and refer to them while asking questions 6-10).

6A. Time Spent Performing Compulsive Behaviors

- How much time do you spend doing these things?
- How much longer than most people does it take to complete your usual daily activities because of the habits?

(When compulsions occur as brief, intermittent behaviors, it may be impossible to assess time spent performing them in terms of total hours. In such cases, estimate time by determining how frequently they are performed. Consider both the number of times compulsions are performed and how many hours of the day are affected.)

• How often do you do these habits?

[In most cases compulsions are observable behaviors (e.g., handwashing), but there are instances in which compulsions are not observable (e.g., silent checking).]

0 - NONE

1 - MILD	(spends less than 1 hr/day performing compulsions), or occasional performance of compulsive behaviors
2 - MODERATE	(spends from 1 to 3 hrs/day performing compulsions), or frequent performance of

compulsive behaviors

3 - SEVERE (spends more than 3 and up to 8 hrs/day performing compulsions), or very

frequent performance of compulsive behaviors

4 - EXTREME (spends more than 8 hrs/day performing compulsions), or near constant

performance of compulsive behaviors (too numerous to count).

6B. Compulsion-free Interval

• How long can you go without performing compulsive behavior?

[If necessary ask: What is the longest block of time in which (your habits) compulsions are absent?]

0 - NO SYMPTOMS

1 - MILD	long symptom-free interval, more than 8 consecutive hrs/day symptom-free
2 - MODERATE	moderately long symptom-free interval, more than 3 and up to 8 consecutive hrs/day symptom-free.
3 - SEVERE	short symptom-free interval, from 1 to 3 consecutive hrs/day symptom free
4 - EXTREME	less than 1 consecutive hr/day symptom-free

7. <u>Interference due to Compulsive Behaviors</u>

- How much do these habits get in the way of school or doing things with friends?
- Is there anything you don't do because of them?

 (If currently not in school, determine how much performance would be affected if patient were in school.)

0 - NONE

1 - MILD slight, interference with social or school activities, but overall performance not impaired

2 – MODERATE definite interference with social or school performance, but still manageable

3 - SEVERE causes substantial impairment in social or school performance

4 - EXTREME incapacitating

8. Distress Associated with Compulsive Behavior

- How would you feel if prevented from carrying out your habits?
- How upset would you become?

(Rate degree of distress/frustration patient would experience if performance of the compulsion were suddenly interrupted without reassurance offered. In most, but not all cases, performing compulsions reduces anxiety /frustration.)

• How upset do you get while carrying out your habits until you are satisfied?

0 - NONE

1 - MILD only slightly anxious/frustrated if compulsions prevented, or only slight

anxiety/frustration during performance of compulsions.

2 - MODERATE reports that anxiety/frustration would mount but remain manageable if

compulsions prevented. Anxiety/frustration increases but remains manageable

during performance of compulsions.

3 - SEVERE prominent and very disturbing increase in anxiety/frustration if compulsions

interrupted. Prominent and very disturbing increase in anxiety /frustration during

performance of compulsions.

4 - EXTREME incapacitating anxiety/frustration from any intervention aimed at modifying

activity. Incapacitating anxiety/frustration develops during performance of

compulsions.

9. Resistance Against Compulsions

• How much do you try to fight the habits?

(Only rate effort made to resist, not success or failure in actually controlling the compulsions. How much the patient resists the compulsions may or may not correlate with his ability to control them. Note that this item does not directly measure the severity of the compulsions; rather it rates a manifestation of health, i.e., the effort the patient makes to counteract the compulsions. Thus, the more the patient tries to resist, the less impaired is this aspect of their functioning. If the compulsions are minimal, the patient may not feel the need to resist them. In such cases, a rating of "0" should be given.)

0 - NONE Makes an effort to always resist, or symptoms so minimal doesn't need to actively

resist.

1 - MILD Tries to resist most of the time.

2 - MODERATE Makes some effort to resist

3 - SEVERE Yields to almost all compulsions without attempting to control them, but does so

with some reluctance.

4 - EXTREME completely and willingly yields to all compulsions

10. <u>Degree of Control over Compulsive Behavior</u>

- How strong is the feeling that you have to carry out the habit(s)?
- When you try to fight them what happens?

(For the advanced child ask:)

• How much control do you have over the habits?

(In contrast to the preceding item on resistance, the ability of the patient to control his compulsions is closely related to the severity of the compulsions.)

0 - COMPLETE CONTROL

1 - MUCH CONTROL experiences pressure to perform the behavior, but usually able to exercise

voluntary control over it

2 - MODERATE CONTROL moderate control, strong pressure to perform behavior, can control it only

with difficulty

3 - LITTLE CONTROL little control, very strong drive to perform behavior, must be carried to

completion, can only delay with difficulty

4 - NO CONTROL no control, drive to perform behavior experienced as completely

involuntary and overpowering, rarely able to delay activity (even

momentarily)
